Experience

Professional

Development Assistant

At SMITCO, March 2024 - September 2024

- Contributed to the maintenance and improvement of the website's views.
- Developed a container damage management module for auditing the condition of each container.
- Implemented the login, registration, and session control module for the development of the company's user/client portal.
- Participated in the development of a business management module to handle invitations for suppliers related to the company.

Programming

Frontend

- Dynamic DOM manipulation to define component behavior using JavaScript or TypeScript instructions, enabling interaction with the backend via Axios.
- Experience with component libraries such as Material UI or similar for utilizing custom components and their properties.

Backend

- Usage of HTTP and WebSocket protocols to communicate with the frontend through both synchronous and asynchronous requests.
- Experience with REST API integration with relational databases, frontend cookie management, and authentication using JWT.
